

SYSTEM HEALTH CHECK

With a MyID® System Health Check you will get a thorough examination of your deployment from a member of Intercede's Professional Services team. They will take a 360 degree look at your current deployment, undertaking a series of activities and tests to ensure your system is operating using best practice.

Included in a MyID System Health Check

Pre-defined, concise, repeatable set of tests and checks	
Gather data through use of database scripts and discussion	
Assess the health of a production MyID system: - Determine product capabilities that are available but not utilised - identifying potential issues that could lead to system failure - Identifying sub-optimal configuration - Identifying usage of deprecated functionality	
Produce a report, providing a clear set of actionable recommendations	

Included in a MyID System Health Check

MyID Environment Questionnaire	
System Interrogation Utility	
Server Diagnostic Report	
System Security Checklist	
Audit Analysis	
System Events Analysis	
Review Internal Cryptographic configuration	
Complimentary Vulnerability Security Report
